

## What can Kayak's new AR tool tell you?

News Staff | September 19, 2018

No more embarrassing trips back up the aisle to gate-check your carry-on.

Kayak has [released](#) its new “bag measurement tool” in the flight search section of its app. Using the camera on the device, the augmented reality (AR) tool can measure your bag and compare it to the airline’s specifications.

The tool first asks users to point the camera at the floor near the bag for calibration. Then it asks them to move the camera around the bag, and it takes measurements. It can compare your bag to multiple airlines’ policies at once, so you can find out which will fit your bag before you book your ticket.

This tool is currently available only on iOS devices running version 11.3 or later.

\*Think\* your carry-on will fit in the overhead? Avoid embarrassing “ um, we’ll need to gate check that” situations by using our new Bag Measurement tool. Using augmented reality, we’re able to size up your baggage and let you know if it’ll pass. Learn more: <https://t.co/1B6tgIe0RT> [pic.twitter.com/TSaCnPvfzG](https://pic.twitter.com/TSaCnPvfzG)
