

## Dirty Jobs in Government: Fleet Management

Sarah Rich | May 29, 2013

Distracted driving isn't just a problem in personal vehicles. It's common in commercial and public-sector fleets too. Now technologies are reaching the market that will block drivers from texting or talking on cellphones while a vehicle is moving.

Distracted driving isn't just a problem in personal vehicles. It's common in commercial and public-sector fleets too. Now technologies are reaching the market that will block drivers from texting or talking on cellphones while a vehicle is moving.

Distracted driving is a common practice not only in commercial fleets, but also public-sector vehicles.

"There's no difference in the public sector," said Kevin Coppolino, Cellcontrol's vice president of corporate development. "Whether it's public transport, public safety, whether it's government based on federal and state. The same thing is happening there."

As legislation outlawing talking on cellphones and texting while driving spreads from state to state, Coppolino said police, state government and public safety fleets will most likely lead by example by putting a stop to mobile phone use while driving a vehicle.
